DETAILED ACTION

Allowable Subject Matter

Claims 1 to 5 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art search has not produced any references which teach, suggest, or disclose applicant's claimed martensitic stainless steel comprising an outer layer scale having surface coverage of not less than 1% and not more than 15% with a thickness of not more than 20 μm , an inner layer scale adjacent to the stainless steel substrate, a martensitic stainless steel comprising 10.5 to 14.0 mass percent chromium, and a rust-preventive oil applied to the surface of the scale layer. Also, the prior art does not teach, suggest, or disclose applicant's claimed method of manufacturing a martensitic stainless steel having a dual oxide layer wherein the outer layer scale has surface coverage of not less than 1% and not more than 15% with a thickness of not more than 20 μm and the claimed process requires complete descaling of an initial scale layer formed on the surface of the stainless steel substrate followed by the steps of quenching, tempering, and partial descaling in order to form the claimed dual oxide layer structure. Furthermore, the experimental data presented in Table 1 on page 17 of the specification clearly demonstrate the criticality of having an outer layer scale with thickness up to 20 μm and surface coverage of 1% to 15% for the purpose of preventing red rust. The prior art does not teach or reasonably suggest any dual oxide layer structure as claimed by the applicant which can prevent red rust. The Examiner cites U.S. Patent No. 6,210,806 (Hidaka, et al.) as relevant prior art. This patent reference has foreign priority to Japan Application 10-368608 (Japan published application 11-302802, cited by the applicant).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
